

## FUNCTIONAL FINGERS: AN UPPER EXTREMITY THERAPY INTENSIVE

- We will provide intensive therapy for your child with hemiparesis in order to improve arm and hand use for success with everyday skills.
- Children will work directly with our experienced OTs and PTs using repetition, skilled techniques, and motivating activities to improve the precision and fluidity of functional skills.
- The intensive therapy model includes casting your child's dominant arm and providing occupational and physical therapy 2 hours a day, 3-5 days a week.
- A comprehensive home exercise program will be created based on your child's individual needs and goals.
- Constraint induced movement therapies are supported by research to be effective with lasting improvements.

***Individual intensives can be provided over school vacation weeks or anytime throughout the year.***

***Save The Date! Summer camp dates are 7/9-7/27, Mon-Fri, 8:30-1:00pm (lunch time included)***
