

INNOVATIVE TREATMENT FOR HEMIPLEGIA

Constraint-Induced Movement Therapy

Constraint-Induced Movement Therapy is a family of treatments that **teach the brain to “rewire” itself** and increase use of the affected arm/hand or leg. CI Therapy is effective in children and adults who have limited use of one side of their body due to diagnoses such as:

- Cerebral Palsy
- Stroke
- Head Injury
- Hemispherectomy
- Brachial Plexus Injury

Now offering **Speech Therapy Intensives** in addition to our upper and lower extremity CIMT programs.

Patients can enroll in 3–4 weeks of intensive therapy for upper or lower extremities or a 2-week refresher if they’ve attended before. Activities are designed to achieve your specific goals such as:

- **Increase use** of arm, hand and fingers
- **Daily living skills** such as dressing, feeding, school activities etc.
- **Gate/Balance**
- **Strength**
- **Coordination**
- **Self-confidence**

Schedule **throughout the year** or attend one of our **2 summer programs** in June and July!
